

KISHOR SORTUR

Aspiring Product Manager

Target roles: Associate Product Manager • Product Analyst • Technical Product Manager

+91 9405846668 | kvsortur@gmail.com | linkedin.com/in/kishorsortur | kishor-sortur-portfolio.lovable.app | github.com/kishorsortur

PROFESSIONAL SUMMARY

Aspiring Product Manager with a certified foundation in AI-powered product management (Airtribe) and an engineering background spanning embedded systems, ML, and network security. Transitioned into product management through structured coursework and M.Tech-mandated industry internships that paired technical execution with cross-functional collaboration. Completed a full 9-step product capstone — research through GTM and metrics — as an academic case study on ixigo's train-booking experience, including a working interactive prototype. Combines structured PM frameworks (RICE, AARRR, PRD writing, North Star metrics) with production debugging and ML pipeline experience for an evidence-first approach to product decisions.

CERTIFICATION

Product Management with AI (AI-Powered PM Certification) — Airtribe 2026

- Completed the full program including a graded final capstone (9-step PM framework: research, problem framing, solution design, prototyping, GTM, metrics, risk analysis) — passed with a live interactive prototype and jury evaluation
- Coursework covered funnel & cohort analysis, AARRR growth framework, RICE prioritization, PRD writing, North Star metric design, and applied AI tooling for product workflows

FLAGSHIP CAPSTONE PROJECT

Confident Alternatives — ixigo Product Capstone (Academic Case Study) 2026

- Ran 20 user-research interactions (survey + in-depth interview) to diagnose why only 26% of users resolve an unavailable train booking within 24 hours; reframed the finding into a single evidence-backed primary barrier after an initial draft overstated the split
- Prioritized 15 candidate solutions via RICE; selected and designed 2 features (RICE 113.3 and 80.0), each addressing a distinct manifestation of the core barrier
- Built and published a live interactive prototype (Lovable) demonstrating the full user flow, with honest confidence communication (High/Medium/Low, never a raw percentage) and a visible anti-favoritism ranking commitment
- Modeled business impact across all three affected travel modes (~₹38.8 crore estimated incremental annual revenue, based on capstone assumptions) and defined a full metrics system: North Star, leading/lagging indicators, and 3 guardrail metrics
- Delivered a 19-slide final presentation and a 14-minute recorded walkthrough for live jury evaluation

ADDITIONAL PRODUCT MANAGEMENT PROJECTS

Case studies applying core PM frameworks — portfolio with full detail at kishor-sortur-portfolio.lovable.app

- Zomato — Mapped an 8-stage funnel, ran cohort analysis, and proposed a North Star + ladder-metrics system for a food delivery platform
- X (Twitter) — Mapped all 5 AARRR stages, defined 5 growth epics, and RICE-scored them into a prioritized roadmap
- VitaFit — Wrote a full PRD for a fitness-app feature pair; separately conducted a Nielsen heuristic UX audit of a checkout flow
- EdTech Recommendation System — Designed a multi-persona recommendation system PRD with full NFRs and a personalization-vs-privacy trade-off analysis

WORK EXPERIENCE

AI/Product Intern — Caze Labs Pvt. Ltd (M.Tech Industry Internship) Nov 2025 – Jan 2026

- Analyzed recurring failure patterns across application logs with a custom Python tool, turning raw technical signals into prioritized, actionable fixes for the engineering team — early practice in triaging problems by impact rather than urgency
- Partnered with engineering to shape CI/CD pipeline requirements (Jenkins, Docker, SonarQube quality gates), weighing deployment speed against release quality — a first hands-on trade-off between scope, speed, and reliability

Application Support Engineer — Accenture

Jul 2024 – Jan 2025

- Sat between end users and engineering, diagnosing production incidents (P1/P2) and reframing technical root causes into problem statements that development and DevOps teams could act on within Agile sprints — early practice in stakeholder-facing problem framing
- Mined incident and usage logs across Oracle, Tableau, and ERP systems with SQL and Python, surfacing patterns that helped the team prioritize which recurring issues to fix first by business and user impact

Professional Upskilling — DevOps Certification Program — upGrad

Jul 2023 – Jan 2023

- Completed an intensive 6-month DevOps certification (CI/CD pipelines, containerization with Docker, cloud fundamentals) to deepen infrastructure and automation skills between the Harman and Accenture roles

Associate Software Engineer, Embedded Systems & ML — Harman Connected Services

May 2022 – May 2023

- Designed and automated validation frameworks in Python and C/C++ for embedded systems, covering functional, regression, and integration testing
- Owned an ML-based predictive maintenance pipeline end-to-end — data preprocessing, feature engineering, model training, and real-time inference on embedded hardware

SKILLS

Product Frameworks: AARRR, RICE Prioritization, PRD Writing, Funnel & Cohort Analysis, North Star / Ladder Metrics, UX Heuristic Evaluation, Trade-off Analysis

Analytical & Technical: Python, SQL, C++, TensorFlow / Scikit-learn, Data Pipelines

Systems & Tools: Linux, Git, Docker, Jenkins, REST APIs, AWS, GCP, Lovable (AI-assisted rapid prototyping)

EDUCATION

Ramaiah Institute of Technology — M.Tech, Computer Network Technology; CGPA 8.3

2024 – Present

Savitribai Phule Pune University — B.E., Electronics & Telecommunication; CGPA 8.7

2019 – 2022

OTHER CERTIFICATIONS

- AWS Cloud Practitioner Essentials — Amazon Web Services
- Introduction to TensorFlow for AI, ML and Deep Learning — Coursera
- Python for Data Science — NPTEL
